

T-LC-60 Tin-lead solder 1 kg

Universal tin-lead solder with good soldering properties

Features & benefits

- Specification of solder containing 60% of tin (Sn) and 40% of lead (Pb), and density of 8.65 g/cm³ ensure the strength and flexibility of the weld
- Melting point of 185-190°C enables you to use it with most soldering guns available on the market
- Operating temperature of 320-420°C ensures that the joint can be used at high temperatures

Applications

- Intended for soft soldering of steel, copper and brass components
- Used for soldering small components of machines and in the electrical engineering industry as well as for soldering components with tin, tin-lead, cadmium, zinc and silver coatings

Equipment

- Approx. 15,5 sticks of tin-lead solder in a single package (5 kg)

Users

- Roofers
- Electricians
- Plumbers
- Fitters
- DIY enthusiasts
