- Dosing of bonded resins and other mediums from coaxial 380 -410 ml cartridges.

Base materials

Installation guide

Product information

1. Charge the battery and install it in the dispenser handle. Release the squeezing piston with the button and pull it backwards.
2. Open the cartridge and attach the proper nozzle.
3. Put the cartridge into the powered gun thoroughly.
4. By pressing the trigger dose the required amount of the product. Dispense to waste until even colour is obtained (min. 10 cm).
5. Resin dosaging can be performed in a manual or repetitive function. The setting is possible by selecting the manual or repate button
6. After finished work empty the gun and clean if necessary.
