

## R-HAC-V Anclaje viniléster en ampolla, con barras de refuerzo, clavado

[Spanish]: Heavy duty anchor with small spacing and edge distances, simply installed by hammering the rebar

### [Spanish]: Approvals and Reports

• ETA-11/0002

## Información del producto

### Características y ventajas

- Producto certificado para el uso con barras de refuerzo en el hormigón no agrietado (ETAG001 Opción 7)
- La resina de alta eficiencia, para fijaciones del mayor grado de seguridad.
- El sistema funciona adhiriéndose a la base; la distribución de tensiones a lo largo del anclaje es relativamente igual, gracias a lo cual puede usarse más cerca del borde del elemento a fijar y en distancias pequeñas.
- La cápsula contiene la cantidad exacta de la resina y el endurecedor siendo un producto muy eficiente.
- La presencia del agua no afecta a la fuerza de unión.
- Opción de uso en el hormigón mojado o seco no agrietado.

### Aplicaciones

- Anclaje de barras de refuerzo
- Bandejas para cables
- Máquinas
- Fabricación e instalación de cercas y portones
- Apoyos para encofrado

### Material de sustrato

Aprobado para su uso en:

- Hormigón fisurado C20/25-C50/60

También para uso en:

- Piedra natural (después de pruebas in situ)

### [Spanish]: Installation guide

## Información del producto

1. Taladre un orificio con el diámetro y la profundidad requeridos.
2. Limpie el orificio a fondo con un cepillo y una bomba manual al menos cuatro veces antes de la instalación.
3. Inserte la cápsula en el orificio.
4. Inserte la varilla roscada en el orificio, luego use herramientas eléctricas para atornillar la varilla roscada en la ampolla.
5. Deje la varilla en reposo hasta que haya transcurrido el tiempo de fraguado.
